

THE EFFECT OF PARTIAL REMOVABLE DENTURE USE ON ORAL HEALTH RELATED QUALITY OF LIFE AND MASTICATORY FUNCTION, AFTER 5 YEARS OF FUNCTION

DR AUGUSTIN MANTSHUMBA

- Senior University of Kinshasa, Head div. of preclinic laboratory Dept. of Dentistry
- 1992-1999 DDS. University of Kinshasa, 2013 Specialist training in Prosthodontics. University of Kinshasa
- Student in PhD in Medical Sciences.

Congo

Denture wearing participants displayed significantly lower oral health related quality of life, more mastication cycles and needed more mastication time, which resulted in significantly larger peanut fragment sizes compared to the non-denture wearing participants.
