DE ODONTOLOGIA INTEGRAL

With a microsurgical approach in soft and hard tissue grafting around implants, using modern biologics and technology , we may achieve a cosmetic and a functional long term stability around implants in these zones . Using microsurgical instruments and optical magnification and illumination , can assure a minimally invasive treatment procedures.

Lectures and hands on and videos all on the below procedures.

Harvesting techniques for Connective tissues.

Zucchelli technique

Trap door technique

Single and double incision technique
